

ECET Monthly Industry Seminar Series

Presents

Control System Design Demonstration

Tuesday Nov 11, 2014
5:30-6:30pm

Design I1 Building

Auditorium Room 112

Come and see technical demonstration of one of the solutions that takes classic PID position/speed control exercises and ties them with one of our proposed solutions called the Quanser Driving Simulator. Students will see that the same PID simulation/design and tuning sequence that they were going to so far, can be covered in a much more interesting and engaging way resulting in a better understanding and appreciation for learning control theory. Hardware in use will be the Quanser QUBE Servo USB plant.

Featured Speaker:

Mr. Amirpasha Javid
Regional Manager,
Controls Application Engineer,
Quanser
