Instructions. Show all your work. Credit cannot and will not be awarded for work not shown. Where appropriate, simplify all answers to a single decimal expansion.

Preliminaries

- (5 points) List the members of the set $S = \{x | x \in \mathbb{Z}^+, 50 \leq x^3 \leq 150\}$.
 $S = \{4, 5\}$
- (5 points) Construct $P(A)$ for $A = \{*, a, 3\}$.
 $P(A) = \{\emptyset, \{*\}, \{a\}, \{3\}, \{*, a\}, \{*, 3\}, \{a, 3\}, \{*, a, 3\}\}$
- (5 points) Compute $|P(A)|$ for $A = \{2, 3, 5, 7, 11, 13, 17, 19, 23, 29, 31\}$.
 $|P(A)| = 2^{11} = 2048$
- (5 points) Give an example of sets A and B such that B is a proper subset of A and $|A| = |B|$.
Let $A = \mathbb{Z}$ and let $B = \mathbb{Z}^+$.
- (5 points) In a Venn diagram, shade $\overline{A \oplus B}$.

- (5 points) Let A be the set of students who live within one mile of campus. Let B be the set of all students who walk to class. What does it mean to say Mary is a member of the set $\overline{A \cap B}$?
Mary walks more than one mile to her classes on campus.
- (5 points) Compute $\lfloor -\frac{3}{2} + \lfloor \frac{1}{2} + \lceil -\frac{5}{2} \rceil \rfloor \rfloor$.
 $\lfloor -\frac{3}{2} + \lfloor \frac{1}{2} + \lceil -\frac{5}{2} \rceil \rfloor \rfloor = -4$
- (5 points) Find the domain and range of the function that assigns to each positive integer its last digit.
The domain is \mathbb{Z}^+ . The range is $\{0, 1, 2, 3, 4, 5, 6, 7, 8, 9\}$.
- (5 points) Give an example of a function $f : \mathbb{Q} \rightarrow \mathbb{Z}^+$ that is neither one-to-one nor onto.
Let $f(\frac{a}{b}) = a^2 b^2$.
- (5 points) Compute $\sum_{i=50}^{175} i$.
 $\sum_{i=50}^{175} i = \sum_{i=1}^{175} i - \sum_{i=1}^{49} i = \frac{175 \cdot 176}{2} - \frac{49 \cdot 50}{2} = 14175$.
- (5 points) Compute $\prod_{i=-533}^{278} (i^3 - 8)$.
Since 2 is an integer between -533 and 278 the product contains the term $2^3 - 8 = 0$ and is 0.
- (5 points) Compute $\frac{100!}{95!5!}$.
 $\frac{100!}{95!5!} = \frac{100 \cdot 99 \cdot 98 \cdot 97 \cdot 96}{120} = 75287520$.

Problems

- (10 points) True or False? If true, prove it. If false, provide a counter-example.
 $(j+k)! = j! + k!$
False! Let $k = j = 2$. Then $(j+k)! = (2+2)! = 4! = 24$ while $2! + 2! = 2 + 2 = 4$.

14. (15 points) Prove $|Q^+| = \aleph_0$.

15. (15 points) Use mathematical induction to prove $\sum_{i=1}^n i^3 = \frac{n^2(n+1)^2}{4}$ for all $n \in \mathbb{Z}^+$.

I. Show that $S(1)$ is true. L.H.S. $\sum_{i=1}^1 i^3 = 1^3 = 1$. R.H.S. $\frac{1^2(1+1)^2}{4} = \frac{4}{4} = 1$. Thus, $S(1)$ is true.

II. Assume $\sum_{i=1}^n i^3 = \frac{n^2(n+1)^2}{4}$ and show $\sum_{i=1}^{n+1} i^3 = \frac{(n+1)^2(n+2)^2}{4}$.

$$\begin{aligned} \sum_{i=1}^{n+1} i^3 &= \sum_{i=1}^n i^3 + (n+1)^3 \text{ which by the inductive hypothesis is } \frac{n^2(n+1)^2}{4} + (n+1)^3 = \frac{n^2(n+1)^2}{4} + \frac{4(n+1)^3}{4} = \\ &= \frac{(n+1)^2[n^2+4(n+1)]}{4} = \frac{(n+1)^2[n^2+4n+4]}{4} = \frac{(n+1)^2(n+2)^2}{4}. \end{aligned}$$

16. (15 points) Let A and B be sets such that $|A| = |B| = \aleph_0$. Prove $|A \cup B| = \aleph_0$.

Since A and B are countable sets we can write each as a_1, a_2, a_3, \dots and b_1, b_2, b_3, \dots . We can now write $A \cup B$ as $a_1, b_1, a_2, b_2, a_3, b_3, \dots$. Since we can order the infinite number of elements of $A \cup B$ it follows that $|A \cup B| = \aleph_0$.
