### March 10 Math 2306 sec 58 Spring 2016

#### Section 9: Method of Undetermined Coefficients

The context here is linear, constant coefficient, nonhomogeneous equations

$$a_n y^{(n)} + a_{n-1} y^{(n-1)} + \cdots + a_0 y = g(x)$$

where g comes from the restricted classes of functions

- polynomials,
- exponentials,
- sines and/or cosines,
- and products and sums of the above kinds of functions

Recall  $y = y_c + y_p$ , so we'll have to find both the complementary and the particular solutions!

March 4, 2016

1/34

### Some Motivating Examples

Find a particular solution of the ODE

$$y'' - 4y' + 4y = 8x + 1$$

We made a guess that  $y_p = Ax + B$ , a line, since the right hand side is a line. We found that this worked with A = 2 and B = 9/4 giving the particular solution  $y_p = 2x + 9/4$ .

$$y'' - 4y' + 4y = 6e^{3x}$$

We made a guess that  $y_p = Ae^{3x}$  which matches the basic form of the right hand side. We found that this worked with A = 6 giving the particular solution  $y_p = 6e^{3x}$ .

#### Make the form general

$$y'' - 4y' + 4y = 16x^2$$

With this one, we tried setting  $y_p = Ax^2$ , but we couldn't solve the equation for any value of *A*.

We corrected it to the form  $y_p = Ax^2 + Bx + C$  and found that this does solve the equation if A = 4, B = 8 and C = 6. So we found the particular solution  $y_p = 4x^2 + 8x + 6$ .

#### General Form: sines and cosines

$$y''-y'=20\sin(2x)$$

Here, we have tried to find a particular solution using the guess

 $y_p = A\sin(2x).$ 

The resulting equation upon substitution became

 $-4A\sin(2x) - 2A\cos(2x) = 20\sin(2x).$ 

Unfortunately, this would require A = -5 = 0 which is always false! Hence we seek to accomodate the presense of the cosine by making the new guess

$$y_p = A\sin(2x) + B\cos(2x).$$

$$\begin{aligned} \Im_{P}^{I} &= 2A \operatorname{Gus}(2x) - 28 \operatorname{Sin}(2x) \\ \Im_{P}^{II} &= -4A \operatorname{Sin}(2x) - 4B \operatorname{Gus}(2x) \\ & & & & \\ & & & & \\ & & & & \\ & & & \\ & & & \\ & & &$$

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □

The Superposition Principle

$$y'' - y' = 20\sin(2x) + 4e^{-5x}$$
  
We can consider two subproblems  
 $y'' - y' = 20 \sin(2x)$  solved by  $y_{p_{1}}$   
and  $y'' - y' = 4e^{-5x}$  solved by  $y_{p_{2}}$   
We faind that  $y_{p_{1}} = -4\sin(2x) + 2\cos(2x)$ 

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □

To find 
$$\forall p_2$$
, gives  $\forall p_2 = Ae^{-5x}$   
 $\forall p_2' = -5Ae^{-5x}$   
 $\forall p_2'' = a5Ae^{-5x}$   
 $\forall p_2'' = \Psi e^{-5x}$   
 $25Ae^{-5x} - (-5Ae^{-5x}) = \Psi e^{-5x}$   
 $30Ae^{-5x} = \Psi e^{-5x}$ 

March 4, 2016 11 / 34

・ロト・西ト・ヨト・ヨー つくぐ

This requires 
$$A = \frac{4}{30} = \frac{2}{15}$$

By super position, 
$$bp = y_{P_1} + y_{P_2}$$
  
 $y_P = -4 \sin(2x) + 2\cos(2x) + \frac{2}{15}e^{-5x}$

Consider the associated homogeneous egn

۱

### We'll consider cases

Using superposition as needed, begin with assumption:

$$y_{p} = y_{p_1} + \cdots + y_{p_k}$$

where  $y_{p_i}$  has the same **general form** as  $g_i(x)$ .

**Case I:** y<sub>p</sub> as first written has no part that duplicates the complementary solution  $y_c$ . Then this first form will suffice.

**Case II:**  $y_p$  has a term  $y_{p_i}$  that duplicates a term in the complementary solution  $y_c$ . Multiply that term by  $x^n$ , where n is the smallest positive integer that eliminate the duplication.
