INSTRUCTIONS: There are 8 problems; the point values are listed with the problems. You may use a calculator with matrix capabilities. No wifi enabled device can be used as a calculator. There are no notes, or books allowed. Illicit use of a smart phone, tablet, device that runs apps, or hand written notes will result in a grade of zero on this exam as well as a formal allegation of academic misconduct. To receive full credit, you must clearly justify your answer.
(1) (10 points) Find all of the values of $x$ such that the matrix $A$ is singular-i.e. not invertible. (Hint: You may wish to consider the determinant.)

$$
\begin{aligned}
& A=\left[\begin{array}{ccc}
x & 0 & 0 \\
0 & x-1 & 2 \\
0 & 3 & x-2
\end{array}\right] \quad \begin{aligned}
\operatorname{det}(A) & =x((x-1)(x-2)-6) \\
& =x\left(x^{2}-3 x+2-6\right) \\
& =x\left(x^{2}-3 x-4\right)=x(x-4)(x+1) \\
A \text { is } \operatorname{singulen} \text { if } \operatorname{det}(A) & =0 . \\
\operatorname{din}(A)=0 & \Rightarrow 0
\end{aligned} \\
& A \text { is } \operatorname{singiler} \text { if } x=0,4, \text { os }-1 .
\end{aligned}
$$

(2) (15 points) For the given matrix $B$, compute the cofactors $C_{11}, C_{21}, C_{31}$. Note the indices of the requested cofactors.

$$
B=\left[\begin{array}{ccc}
1 & 4 & -1 \\
0 & 1 & 3 \\
2 & 2 & -2
\end{array}\right] \quad \begin{aligned}
& c_{11}=(-1)^{2}\left|\begin{array}{cc}
1 & 3 \\
2 & -2
\end{array}\right|=-2-6=-8 \\
& c_{21}=(-1)^{3}\left|\begin{array}{cc}
4 & -1 \\
2 & -2
\end{array}\right|=-(-8+2)=6 \\
& c_{31}=(-1)^{4}\left|\begin{array}{cc}
4 & -1 \\
1 & 3
\end{array}\right|=(12+1)=13
\end{aligned}
$$

$$
C_{11}=-8
$$

$$
C_{21}=\frac{6}{}
$$

$$
C_{31}=13
$$

(3) (10 points) Use coordinate vectors to determine if the given polynomials are linearly dependent or independent in $\mathbb{P}_{3}$. Use the elementary basis in $\mathbb{P}_{3}$. If they are dependent, clearly identify a linear dependence relation.

$$
\begin{gathered}
\mathbf{p}_{1}=t+t^{2}-t^{3}, \quad \mathbf{p}_{2}=2+3 t-2 t^{2}, \quad \mathbf{p}_{3}=4+5 t-5 t^{2}+t^{3}, \quad \mathbf{p}_{4}=1+t+2 t^{3} \\
{\left[\vec{p}_{1}\right]_{\varepsilon}=\left[\begin{array}{c}
0 \\
1 \\
1 \\
-1
\end{array}\right] \quad\left[\vec{p}_{2}\right]_{\xi}=\left[\begin{array}{c}
2 \\
3 \\
-2 \\
0
\end{array}\right] \quad\left[\vec{p}_{3}\right]_{\varepsilon}=\left[\begin{array}{c}
4 \\
5 \\
-3 \\
1
\end{array}\right] \quad\left[\vec{p}_{n}\right]_{\varepsilon}=\left[\begin{array}{l}
1 \\
1 \\
0 \\
2
\end{array}\right]}
\end{gathered}
$$

$$
\left[\begin{array}{cccc}
0 & 2 & 4 & 1 \\
1 & 3 & 5 & 1 \\
1 & -2 & -5 & 0 \\
-1 & 0 & 1 & 2
\end{array}\right] \xrightarrow{\operatorname{rref}}\left[\begin{array}{cccc}
1 & 0 & -1 & 0 \\
0 & 1 & 2 & 0 \\
0 & 0 & 0 & 1 \\
0 & 0 & 0 & 0
\end{array}\right]
$$

They ane linearly dependent.

$$
\text { From the matrix, } \vec{p}_{3}=-\vec{p}_{1}+2 \vec{p}_{2}
$$

$$
\vec{p}_{1}-2 \vec{p}_{2}+\vec{p}_{3}=\overrightarrow{0}
$$

is a linear dependence relation.
(4) ( 25 points) Find bases for each of the row space, column space, and null space of the given matrix. State the rank and the nullity of the matrix.

$$
A=\left[\begin{array}{ccccc}
1 & 4 & 2 & 1 & 6 \\
0 & 4 & 4 & 0 & 4 \\
3 & -1 & -7 & 1 & 1 \\
2 & 1 & -3 & 0 & 1
\end{array}\right] \xrightarrow{\operatorname{rret}}\left[\begin{array}{ccccc}
1 & 0 & -2 & 0 & 0 \\
0 & 1 & 1 & 0 & 1 \\
0 & 0 & 0 & 1 & 2 \\
0 & 0 & 0 & 0 & 0
\end{array}\right] \quad \begin{aligned}
& x_{1}=2 x_{3} \\
& x_{2}=-x_{3}-x_{5} \\
& x_{3} \text { f on } \\
& x_{4}=-2 x_{5} \\
& x_{5} \text { free }
\end{aligned}
$$

Pivot columns $1,2,4$

$$
\begin{aligned}
& \operatorname{col} A=\operatorname{spar}\left\{\left[\begin{array}{l}
1 \\
0 \\
3 \\
2
\end{array}\right],\left[\begin{array}{c}
4 \\
4 \\
-1 \\
1
\end{array}\right],\left[\begin{array}{l}
1 \\
0 \\
1 \\
0
\end{array}\right]\right\} \\
& \begin{array}{l}
\text { These poses } \\
\text { are }
\end{array} \\
& \text { Row } A=\operatorname{spon}\left\{\left[\begin{array}{c}
1 \\
0 \\
-2 \\
0 \\
0
\end{array}\right],\left[\begin{array}{l}
0 \\
1 \\
1 \\
0 \\
1
\end{array}\right],\left[\begin{array}{l}
0 \\
0 \\
0 \\
1 \\
2
\end{array}\right]\right\} \\
& \text { For } \vec{x} \text { in woe } A \quad \vec{x}=x_{3}\left[\begin{array}{c}
2 \\
-1 \\
1 \\
0 \\
0
\end{array}\right]+x_{5}\left[\begin{array}{c}
0 \\
-1 \\
0 \\
-2 \\
1
\end{array}\right] \\
& \text { Wb } A=\operatorname{Secn}\left\{\left[\begin{array}{c}
2 \\
-1 \\
1 \\
0 \\
0
\end{array}\right],\left[\begin{array}{c}
0 \\
-1 \\
0 \\
-2 \\
1
\end{array}\right]\right\} \quad \begin{array}{c}
\text { this is } \\
\text { a }
\end{array} \text { basis. }
\end{aligned}
$$

Rank $A=$ $\qquad$ 3
(5) (5 points) Suppose that $A, B$ and $P$ are $30 \times 30$ matrices and that $P$ is invertible ${ }^{1}$. If $B=P^{-1} A P$, show that $\operatorname{det}(B)=\operatorname{det}(A)$.

$$
\begin{aligned}
B=P^{-1} A P \Rightarrow \operatorname{dt}(B) & =\operatorname{det}\left(P^{-1} A P\right) \\
& =\operatorname{det}\left(P^{-1}\right) \operatorname{det}(A) \operatorname{dt}(P)
\end{aligned}
$$

Since scala multiplication commutes

$$
\begin{aligned}
\operatorname{det}(\beta) & =\operatorname{det}\left(P^{-1}\right) \operatorname{det}(P) \operatorname{det}(A) \\
& =1 \cdot \operatorname{det}(A) \\
& =\operatorname{det}(A) \quad \text { as required. }
\end{aligned}
$$

(6) (20 points) Solve the system using a matrix inverse.

$$
\begin{gathered}
\left.\begin{array}{c}
3 x_{1}+2 x_{2}=4 \\
2 x_{1}-5 x_{2}=7 \\
2
\end{array}\right]\left[\begin{array}{cc}
3 & 2 \\
2
\end{array}\right]\left[\begin{array}{l}
x_{1} \\
x_{2}
\end{array}\right]=\left[\begin{array}{l}
4 \\
7
\end{array}\right] \quad A=\left[\begin{array}{cc}
3 & 2 \\
2 & -5
\end{array}\right] \operatorname{dt}(A)=-15-4 \\
=-19 \\
A^{-1}=\frac{-1}{19}\left[\begin{array}{ll}
-5 & -2 \\
-2 & 3
\end{array}\right] A^{-1}\left[\begin{array}{l}
4 \\
7
\end{array}\right]=\frac{-1}{19}\left[\begin{array}{c}
-20-14 \\
-6+21
\end{array}\right]=\frac{-1}{19}\left[\begin{array}{c}
-34 \\
13
\end{array}\right] \\
{\left[\begin{array}{l}
x_{1} \\
x_{2}
\end{array}\right]=\left[\begin{array}{l}
\frac{34}{19} \\
\frac{-13}{19}
\end{array}\right]}
\end{gathered}
$$

${ }^{1}$ You may use the established result that $\operatorname{det}\left(P^{-1}\right) \operatorname{det}(P)=1$.
(7) (10 points) Suppose the matrices $A$ and $B$ are row equivalent, and $B$ was obtained from $A$ by doing the following sequence of row operations to $A$ :

1. $R_{1} \leftrightarrow R_{3}$ (-1)
2. $-2 R_{1}+R_{2} \longrightarrow R_{2}$ no chase
3. $\frac{1}{2} R_{2} \longrightarrow R_{2}$ $\frac{1}{2}$ factor
4. $3 R_{2}+R_{3} \longrightarrow R_{3}$ no change
5. $3 R_{4} \longrightarrow R_{4}$ 3 factor
(a) If $\operatorname{det}(A)=6$, determine the value of $\operatorname{det}(B)$.

$$
\operatorname{det} B=\frac{-3}{2} \operatorname{det}(A)=\frac{-3}{2}(6)=-9
$$

(b) If instead $\operatorname{det}(B)=-15$, what is the value of $\operatorname{det}(A)$ ?

$$
-15=\frac{-3}{2} \operatorname{dit}(A) \Rightarrow \operatorname{dit}(A)=-\frac{2}{3}(-15)=10
$$

(8) (5 points) Either show that the given set is a subspace of $\mathbb{P}_{2}$ by finding a spanning set, or show that it is not a subspace of $\mathbb{P}_{2}$ by demonstrating that it violates one of the necessary properties of subspaces.

$$
\begin{aligned}
& \left\{\mathbf{p}(t) \in \mathbb{P}_{2}: \mathbf{p}(0)=\mathbf{p}(1)\right\} \\
& \text { If } \vec{p}=p_{0}+p_{1} t+p_{2}+2 \text { and } \vec{p}(0)=\vec{p}(1) \text {, the } \\
& \vec{p}(0)=p_{0}=\vec{p}(1)=p_{0}+p_{1}+p_{2} \\
& \Rightarrow p_{1}+p_{2}=0 \quad p_{1}=-p_{2} \\
& \text { So } \quad \vec{p}=p_{0}+p_{1}\left(t-t^{2}\right) \\
& \text { It is a subspou with spinning set } \\
& \left\{1, t-t^{2}\right\} \text {. }
\end{aligned}
$$
