To Download this data set for use on a spreadsheet, use one of the two buttons below  
(for more detailed instructions, see below):

### MacIntoshInstructions:

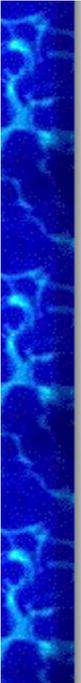

To download this file as an **Excel** document (Office 98 version), click on the Excel icon above and a menu will appear asking into which folder you want this file downloaded. Once downloaded, you can then open this file with double click on its icon or from within Excel. (Alternatively, place your curser on the Excel icon above and hold down the mouse button . A menu will appear. Select "save this link as" and in the next menu select "text". Open this saved document from within Excel.)

To download this file as a **text** document, place your curser on "TEXT" in the box above and hold down the mouse button. A menu will appear. Select "save this link as" and in the next menu "text". Open this saved document from within your spreadsheet program. The data is tab delimited (general format).

Alternatively, click on "TEXT" in the box above to go to a tab delineated text version, then cut data and paste into a blank spreadsheet. This will put all the data on each row in a single column, so you will have to parse the column (the command in Excel is "text to columns..." under the "Data" pull down menu).

### PC Instructions:

To download this file as an **Excel** document (Office 98 version) click on the Excel icon above and this file is downloaded to your computer and should open in Excel automatically. (Alternatively, place your curser the Excel icon above and hold down right

mouse button. A menu will appear. Select "save... as" and in the next menu select "text". Open this saved document from within Excel.)

To download this file as a **text** document, place your cursor on "TEXT" in the box above and hold down the right mouse button. A menu will appear. Select "save link as" and in the next menu "plain text". Open this saved document from within your spreadsheet program. The data is space delimited (general format).

Alternatively, click on "TEXT" in the box above to go to a tab delineated text version, then cut data and paste into a blank spreadsheet. This will put all the data on each row in a single column, so you will have to parse the column (the command in Excel is "text to columns..." under the "Data" pull down menu).

### **Pencil and Pen instructions:**

If you don't like computers, hold pencil in preferred hand, write down data on a piece of paper, and graph data by hand on graph paper.
