## Section 1: Concepts and Terminology

Suppose $y=\phi(x)$ is a differentiable function. We know that $d y / d x=\phi^{\prime}(x)$ is another (related) function.

For example, if $y=\cos (2 x)$, then $y$ is differentiable on $(-\infty, \infty)$. In fact,

$$
\frac{d y}{d x}=-2 \sin (2 x)
$$

Even $d y / d x$ is differentiable with $d^{2} y / d x^{2}=-4 \cos (2 x)$.

```
We didn't even get through this one slide!
We'll do it on Wednesday!
```
